

The Revive Secret

Revive is an organic-based soil treatment made from a combination of soil wetting agents, natural organic lignosulfonates and iron. Revive allows water to penetrate deeper into hard-to-wet soils, even through thatch and mat. Revive helps save water and solves problems associated with hard, dry, compact soils and the additional iron helps thicken and turn your lawn dark green.

What Revive Does

- Conserves water during times of drought, severe heat and watering restrictions by wetting the soil deeper allowing your lawn to store more water between irrigations.
- Makes better use of water as it penetrates deeper into the soil, runs off less on slopes, and reduces evaporation.
- Moves fertilizer deeper into the roots, while providing supplemental iron.
- Assists in breaking up and loosening compacted soil by promoting root activity.
- Helps eliminate dry brown spots and turn lawns green.

WaterWise System

Revive improves water penetration into soil making more water available to plant roots even in times of restricted water use and drought so you can go longer between waterings, enhance your lawn's appearance and reduce total water consumption.

Organic-Based Materials

Developed with natural, organic-based products.

Green Lawn Formula

The ingredients in Revive's formula are fortified with iron to produce greener, thicker lawns.

Kid & Pet Friendly

Safe, organic-based formula treats your lawn without requiring your family and pets to stay off the lawn for hours!

Ugly Lawn Eliminator

Turn lawns dark green and help maintain thickness. Stop the dry brown spots in your lawn.

Directions For Use

Lawn and Turf Areas: Apply Revive any time during the growing season. Revive is especially beneficial if applied before, during or after applying fertilizer. Spot treat brown areas, where puddles form, slopes where run-off occurs and around landscape plants then spray the entire lawn area.

For best results, thoroughly water after application. You can apply Revive after sodding or seeding.

Zonas de césped y turba: Aplique Revive en cualquier momento de la época de crecimiento. Revive es especialmente beneficioso si se aplica antes, durante o después del fertilizante. Trate las zonas marrones, zonas en las que se forman charcos, pendientes en las que hay escurrimiento y alrededor de las plantas ornamentales. A continuación, rocíe todo el césped. Para obtener mejores resultados, riegue completamente después de la aplicación. Puede aplicar Revive después de la siembra o la cobertura con césped.

For lawns grown on heavy clay, caliche, or alkaline soil or lawns that are heavily thatched and matted, 2-3 applications are recommended at 10-day intervals when beginning treatment.

Para césped sobre suelo arcilloso, de caliche o alcalino, o para césped muy seco o maltratado, se recomienda realizar 2 a 3 aplicaciones cada 10 días al comenzar el tratamiento.

Landscape and Flower Beds: Treat entire area(s) before planting or before plants flower. **For best results, thoroughly water after application.** Re-apply as needed. Do not apply directly on flower petals or ferns.

Paisajismo y canteros: Trate toda la zona antes de la plantación o antes de la floración. Para obtener mejores resultados, riegue completamente después de la aplicación. Vuelva a aplicar cuando sea necesario. No aplique directamente sobre los pétalos de las flores o sobre helechos.

Recommended Re-application Frequency:

Spot Treatment problem areas only:
Spring: 6 wks Summer: 4 wks Fall: 6 wks
Broadcast spray entire lawn:
Spring: 6-8 wks Summer: 4-6 wks Fall: 6-8 wks

Frecuencia recomendada de reaplicación:

Únicamente en las zonas con tratamiento de manchas:
Primavera: 6 semanas Verano: 4 semanas Otoño: 6 semanas
Rociado de todo el césped:
Primavera: 6 a 8 semanas Verano: 4 a 6 semanas Otoño: 6 a 8 semanas

Application Rate: One half gallon (64oz.) 1.82 L covers 2000 sq ft.
Proporción de aplicación: Medio galón (64 onzas) 1,82 litros cubren 2000 pies²
